We are looking for a:

Web Application Developer (F/M)

You will play a key role in our team, making an important link between different roles:

- Take part of designing and developing all aspects of our various systems, be it customer oriented or for internal use.
- You will have the opportunity to discuss your own ideas and designs with the team and the ability to bring them to life.
- A very dynamic and fast paced working atmosphere allows you to work on different projects in different aspects and various technologies.

What we are looking for:

- You hold a Master's or a Bachelor's degree in Computer Science, related field, or equivalent work experience.
- You have a good knowledge and experience in modern web technologies and design principles. Knowledge in C#, JavaScript, AngularJS, JQuery, HTML5, and ASP.NET MVC is a must.
- Knowledge in WPF and Xamarin app development is a big plus.
- Knowledge and experience in distributed systems in the cloud, and Cloud providers like Microsoft Azure or Amazon AWS is an asset.
- You are extremely passionate about good design and user experience, and you have an obsession for details that differentiate an intuitive and user friendly interface from a bad one.
- You have experience in building sophisticated single-page web applications.
- Knowledge and experience in using graphic design tools like Adobe Photoshop and Adobe Illustrator is an asset.
- You are proactive and have the ability to contribute to the team with new ideas and designs.
- You have a sense of responsibility.
- You are a dynamic team player, and you're able to work autonomously.
- You are a straightforward communicator, and can voice out your opinion in a precise and clear way.
- You are fluent in English.

What we offer:

- An opportunity to take part in the growth of an innovative company, and developing its business internationally.
- As our team is expanding, you will have growth opportunities that are only limited by your own ambitions.
- A fun place to work that comes together with a competitive salary and benefits.

VILOC

get your tools connected

Viloc is a young, high-tech company with a unique solution for tool management in the construction sector.

We install tiny radio transmitters on small construction tools like drills or angle grinders. These RF tags automatically transmit data via base-units to the internet, allowing our customers to track their tools in a web application, giving them information about the whereabouts of the tools, their usage, etc.

This web application makes it possible to automate the tool management at these construction companies. At this moment, we are applying this at numerous major construction companies in Belgium and the Netherlands, but we are planning a rapid roll-out throughout Europe and beyond. Our vision is that, in 5 years, every drill will be connected to the "internet of things". We will be the enabler for the construction companies and the tool manufacturers to realize this.

To bring this ambition to reality, we need a strong development team with a multi-disciplinary experience in software, hardware, firmware and product development.
